### 1.0 Executive Summary

HitlTgroup operates from a single location within Poland. They provide data sanitisation, asset remarketing and recycling services which fall under the scope of ADISA Asset Recovery Standard 8.0.(EU). Their certification is on the facility at ul. Kominiarska 42ab,51-180 Wrocław, Polandand does not include anything scoped out.

As part of the evaluation of compliance against Standard 8.0 the sanitisation tool sets were assessed, and the list of approved media is listed in 2.0. During the audit compliance to all 214 criteria were evaluated but only compliance to the Essential and the DIAL level of customer requirements is needed in order to be certified.

The initial Audit Findings were:

	Major Non- Conformances	Minor Non- Conformances	Observations
Essential	11	22	4
Highly Desirable		6	
Dial 1	1	1	1
Dial 2	5		
Dial 3	17		

Due to the rigorous nature of the ADISA audits, it is quite normal to have non-conformances with the non-conformance process being followed to ensure corrective actions are taken and remediation plans agreed where required.

After the Non-Conformance process was followed HitlTgroup successfully met all requirements to achieve a Pass with MERIT at DIAL 2.

Status	Description	Corrective Action	
Observations	Where an auditor identifies a situation where the ITAD's operations are marginally compliant or where they can see how the current compliant position may be compromised with an operational activity, they will identify this as an "Observation".  Marginally compliant can mean a situation where there is an occasional example of non-conformance. For example, missing a signature on a collection note.	Observations do not require a corrective action after the audit at which they were observed	
Minor non- conformance	A Minor non-conformance will be a non-fulfilment of a criterion which does not materially increase risk but is a deviation from the Standard. For example, a single	All minor non-conformances can be passed after additional evidence is received or when the ITAD and auditor agree a

	CCTV camera or a company policy document not being in place.	corrective action which is timebound.
	A Minor non-conformance can also be a partially met criterion where the capacity to achieve conformance is apparent, but the operational delivery of the service was not fully compliant.	
	A Minor non-conformance can also be where the non-conformity does increase risk but there are other operational countermeasures which mitigate that risk.	
Major non- conformance	Major non-conformance will be a non-fulfilment of a criterion which DOES materially increases risk of data loss or legal non-compliance due to deviation from the Standard and has no additional controls or mitigations in place.	Corrective actions must be taken if a major non-conformance is identified.

# **Assessment Participants**
